

CAMBRIDGE PROJECT FOR LATER LIFE - MAGNETIC
RESONANCE IMAGING PHASE

PROJECT NO

A QUALITY OF IMAGE

- (i) Positioning difficulty (0-no difficulty
4-bad positioning)
- (ii) Movement (0-no artefacts
4-gross movement)
- (iii) Overall image quality (0-perfect
4-gross degradation)

B ASSESSMENT OF IMAGE

- (i) Ventricular size
- Lateral (0-normal size
4-gross dilatation)
- Third (0-normal size
4-gross dilatation)
- (ii) Cortical atrophy (0-no atrophy
4-gross atrophy)
- Symmetrical-1
Asymmetrical-2
(specify.....)
- Generalised-1
Focal-2
(specify.....)

(iii) White matter

caps (0-nil 4-gross)

rims (0-nil 4-gross)

Infarct-number

0-24=enter actual number

25-49=enter 25

50+ =enter 50

-description

no abnormality=0

discrete=1

confluent=2

-location

no abnormality=0

abnormality=1

R temporal

Estimated number lesions

L temporal

Estimated number lesions

occipital

parietal...

Hippocampal abnormality

no abnormality=0

focal=1

generalised=2

symmetrical=1

asymmetrical=2

(specify.....)

(iv) Basal ganglia

globus pallidus (0-not seen 4-obvious)

red/substantia (0-not seen 4-obvious)

dentate (0-not seen 4-obvious)

(v) Abnormalities of thalamus and brain stem

Thalamus

no abnormality=0

focal=1

diffuse=2

Brain stem
no abnormality=0
focal=1
diffuse=2

IN YOUR OPINION WITH WHICH OF THE FOLLOWING DIAGNOSES IS
THIS MRI MOST COMPATIBLE?

Completely normal=0
SDAT=1
MID=2
SDAT+MID=3
Other=4
